

Requestly API Client

The standardized, secure, and future-ready API testing standard

One client. Every protocol. Full lifecycle.

• GET STARTED, INSTANTLY

- **Data control** — team projects synced for collaboration, or local projects that never leave the machine
- **Secure access** — SSO with Okta for team projects
- **Easy import** — one click from Postman, cURL, OpenAPI, WSDL, HAR, SoapUI

• DAILY WORKFLOW

- **Core:** requests, collections, environments, variables
- **Auth:** OAuth 2.0/1.0, AWS SigV4, Digest, NTLM, JWT, API Key, Basic
- **Vault:** secrets from local vault or Azure Key Vault, HashiCorp Vault, etc.
- **Git:** local projects natively versioned

• BEYOND REST

- **gRPC** — reflection, unary & streaming, metadata
- **WebSocket** — full-duplex, live messages
- **Socket.IO** — events, acks, auto-reconnect
- **MQTT** — pub/sub messaging
- **GraphQL** — schema-aware queries

• SCRIPT, TEST & AUTOMATE

- **Dynamic scripting** — pre-request & post-response
- **Validation** — assertions & tests
- **AI test authoring** — generate tests from live responses
- **Bulk execution** — Collection Runner + data-driven testing

• RUN ANYWHERE, IN ANY PIPELINE

- **CLI** — fully automated, headless command-line interface
- **Local reports** — detailed output for immediate feedback on every run
- **CI/CD integration** — drops seamlessly into any existing pipeline infrastructure

• DESIGN & PUBLISH

- **API Specs** — design and test API structure directly
- **Generate docs** — auto-generate documentation for any collection
- **Publish** — public, internal, or password-protected

• MOCK SERVER

NEW

- Simulate endpoints with configurable routes, responses & matching rules
- Instant stub APIs — no backend required for parallel dev/test

• TEST REPORTING & ANALYTICS

NEW

- Detailed reports across manual & automated runs
- Pass/fail trends and analytics dashboard

• SCHEDULED RUNS

NEW

- Automate recurring collection runs on a schedule
- Results flow straight into reporting & analytics

• AI AGENTS

- Agentic AI that builds requests, debugs failures, and bulk-updates collections
- Speeds up authoring & maintenance across the API lifecycle
