

Requestly API Client

Standardized, secure, and future-ready API testing standard

Get started

Data Control

Team projects - synced for collaboration
Local projects - data on your machine

Secure Access

Single sign-on with Okta for your team projects

Easy Import

One-click import: Postman, cURL, OpenAPI, WSDL, HAR, and SoapUI

Everything your daily work needs

Core Workflow

Requests · Collections · Environments · Variables

Authorization

OAuth 2.0 & 1.0 · AWS SigV4 · Digest · NTLM · JWT · API Key · Basic

Native Git Control

Local projects versioned with native Git

Vault

Secure secrets from local vault and secret providers like Azure Key Vault, Hashicorp Vault, etc

Beyond REST — native protocol support

gRPC

Reflection, unary & streaming, metadata

WebSocket

Full-duplex, live messages

Socket.IO

Events, acknowledgements, auto-reconnect

MQTT

Pub/sub messaging

GraphQL

Schema-aware queries

Script and test your APIs

Dynamic Scripting

Pre-request & post-response scripts

Validation

Assertions & tests

AI Test Authoring

AI-generated tests from your responses

Bulk Execution

Collection Runner and Data Driven Testing

Run anywhere, in any pipeline

CLI

Fully automated headless command line interface.

Local Reports

Detailed local reports and output for immediate feedback on runs.

CI/CD Integration

Drops seamlessly into any existing CI/CD pipeline infrastructure.

Design and publish

API Specs

Create a specification to design and test the API's structure.

Generate API docs

Automatically generate documentation for any collection.

Publishing

Publish docs — public, internal, or password-protected.

Future Roadmap

Execution & Analytics (FY'27 Q2)

- Scheduled Runs
- Reporting and analytics dashboard
- Response Visualiser

API & Connectivity (FY'27 Q2)

- Mock Server
- API Catalogue
- API Flows
- MCP Client

AI-Powered Features (FY'27 Q3)

- AI Request Builder
 - AI Test Debugger
 - AI Bulk-update changes
- ...and more on the way*

Building the future of API testing and automation.
